FarmLens

BUILT WITH CODEX
Codex & Astra Builder Day | Sydney
20 October 2026

A clearer starting point for your land.

Your land, your climate, your best crops, with the reasons.

Recorded Dubbo demo · 15 crop profiles · scores are screening indices, not success probabilities.

ASK FARMLENS

Meet Finn.

A friendly guide to the report. Explore why a crop appears, what to watch and which assumptions need checking.

Supported local questions. Optional model-written crop explanations are a separate feature.

01 / UNDERSTAND THE PLACE

Land, soil and weather

Modelled Australian soil, dated imagery and weather, with source status visible.

02 / INSPECT THE REASONING

Every score has a reason

Explicit environmental ranges, factor bars and source-linked NSW checks.

03 / EXPLORE THE ASSUMPTIONS

Water and budget scenarios

Separate tools for historical water gaps and editable gross margins.

Built to make uncertainty visible.

Unknown and unavailable data stay labelled. Imagery is dated context; soil values are modelled.

Python engine. Custom web UI.

Offline tests cover calculations and failure states. Local caching and bounded requests support the showcase.

Next: learn with local experts.

Weights and scenarios remain uncalibrated. Seek agronomist review and compare with field measurements.
